Anyone can set up a wireless network, right?

But can anyone connect to it? And what can you do with it once it's working?

Setting Up a Network Router

Having trouble setting up your router for one of your customers? Know how to find a MAC address, even when you're not looking for a burger? Do you know the difference between a DHCP IP address and a static IP? How about WAP vs. WEP and what the heck is encryption, anyway? Know all about WPA algorithm, AES and TKIP security? Or did you think that "algorithm" is a former vice president dancing? Come join Universal Remote Control as we aid you in this process. Learn everything that the setup wizard doesn't show you when installing a new access point in a home or business. Let's face it; networking is a different world, complete with its own language. But once it has been sorted out for you, you can handle it with ease.

Control, Content and a Keypad; Native 2-way

Go beyond Cover-art with the URC network devices and 2-way applications to provide your clients a greater level of control over their equipment by adding metadata, content and IP operation. Give them a rich interactive experience using a variety of products and features. With the considerable array of 2-way apps for our Wifi remotes, and adding a network keypad and base station, you allow control and feedback even to your budget conscious customers. Using CCP to instantly add these 2-way features, and to program the MRX-1 and KP-4000, gets you quickly through the set-up and demonstration process. Feel at ease offering this level of control system and be confident that your installation is expandable and upgradeable as new technologies and applications become available.

This Networking and 2-way class gives you a head start on the road toward complete network and control mastery. And you'll earn CEDIA CEU credits along the way!
